What you can do with this procedure

Use the L2 Table sheet of the device file to change the virtual interface name.

(1) Generation of device port management table

Export the device file by referring to "2-4 Exporting Device Files (with commentary)".

(2) Update [L2 Table] sheet Change virtual interface name

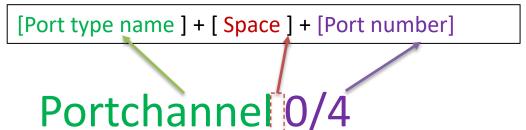

Device file [L2 Table] sheet Enter a new virtual interface name by breaking the item in the "Virtual Port Name" column you want to rename with [Alt] + [Enter].

					Break line and enter new
De de Nove	D. AM. J.	De d Nesse	Video I Decid Medic	No. of Dec. (No. of Dec.)	virtual interface name
Device Name	Port Mode	Port Name	Virtual Port Mode	Virtual Port Name	Conner vanie (Conina Separateu)
				Vlan 100	
demo001			Routed (L3)	Vlan 3999	Defalut_Vlan
	Switch (L2)	GigabitEthernet 0/0			Defalut_Vlan
	Routed (L3)	GigabitEthernet 0/1			

^{*} The changes are listed in red, but the color does not matter.

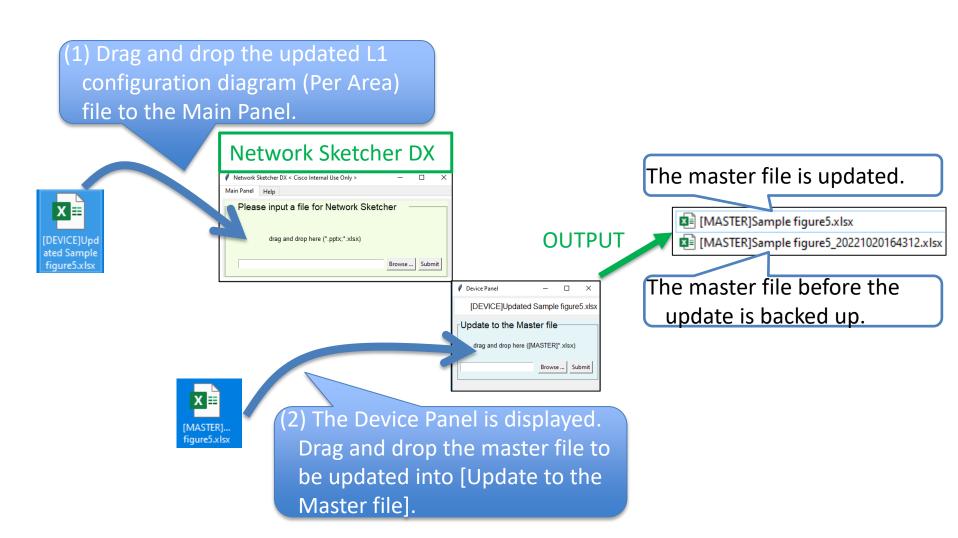

The naming convention for "Virtual Port Name" is as follows, as with physical interfaces.

Please put a space between the port type name and the port number.

(3) Synchronization of updated information

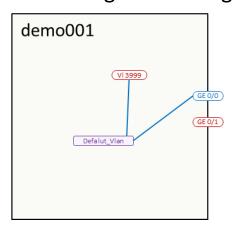

Select and synchronize the updated device file and the destination master data file. Since the master data is updated, the original master data is backed up with "_yyyymmddhhss" in the file name.

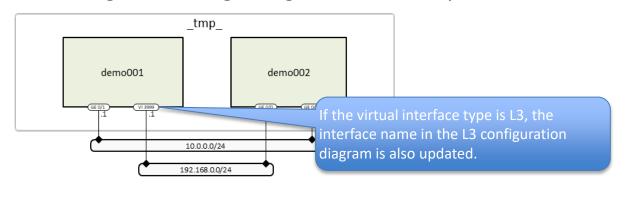

(4) Confirmation of L2L3 configuration diagram

"2-2. generation of L2 diagram (with commentary)", "2-3. generate of L3 diagram" to generate an L2L3 configuration diagram and confirm that the changes are reflected.

L2 configuration diagram: generation example

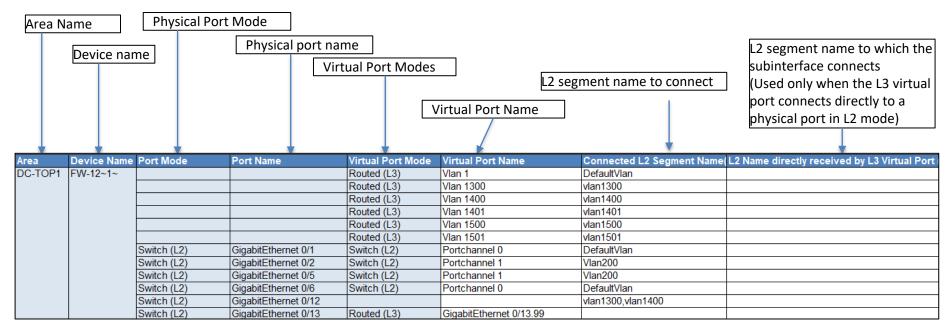

L3 configuration diagram: generation example

[Reference] Device File [L2 Table] Sheet Explanation

Description of the [L2 Table] sheet for the device file name [DEVICE]~. Refer to the < L2/L3 Configuration > section for the desired Layer 2 configuration method.
